Recycling contamination can be anything other than what is intended to be collected and recycled, including unwanted substances such as residual food or liquid that can be harmful to the recycling process. Once a contaminated item comes into contact with other recyclables, the entire batch can potentially become contaminated.

"We all play a critical role in keeping our community recycling programs running properly and helping to reduce contamination," said Pete Keller, vice president of recycling and sustainability. "Many consumers are placing contaminated items into their containers and consequently, many of those recyclables end up in the landfill and not where they were intended. This Earth Day and throughout the year, we encourage everyone to take #1MORE step to help reduce contamination by incorporating four easy tips into your daily routine."

Four Tips to [Reduce Recycling Contamination](#):

Tip #1: Only Place These Recyclables in the Curbside Recycling Container
Keep it simple and focus on these four categories of curbside recyclables:

- Paper, including newspapers, envelopes, mail, phone books and magazines
- Flattened cardboard, file folders and poster board
- Plastic bottles and containers
- Aluminum and tin food and beverage cans

Composite packaging, such as cardboard and plastic used together in a 24-pack of bottled water where there is a cardboard bottom and shrink-wrapped plastic, cannot be recycled unless they are separated before placing in the recycling container.

Tip #2: Recyclables Should Be Empty, Clean & Dry

Make sure recyclables are empty of any contents, clean of any residue and dry before placing them into the recycling container.

Tip #3: When In Doubt, Throw It Out

Many consumers put items into the recycling container hoping that they are recyclable. Despite these good intentions, some items should not be mixed in with clean recyclables. If questioning whether something is recyclable or not, follow the guidance, "When in doubt, throw it out," by tossing the items into the trash container.

Tip #4: Know What Should Never be Placed in the Curbside Recycling Container

Below is a list of items that should never be placed into a curbside recycling container:

- Plastic grocery and shopping bags
- Food waste
- Clothing, shoes and other textiles
- Yard waste, plants, grass clippings, cords and garden hoses
- Styrofoam, fiberglass and other foam packing material
- Disposable diapers and puppy pads
- Tissue, paper towels, paper napkins and hardcover books
- Treated or contaminated wood, sheetrock or drywall
- Metal such as chains, tools and car parts
- Electronic devices and equipment as well as batteries, fluorescent bulbs and ballasts are hazardous materials that must be handled differently than other household waste and recyclables. For business customers, Republic offers programs to [recycle electronics](#) securely and responsibly, and to safely dispose of [batteries, bulbs and ballasts](#).

Republic continues to steadily build upon its industry-leading sustainability platform while earning notable recognition for sustainability and corporate responsibility achievements, as demonstrated by being named to the [Forbes America's Best Large Employers](#) 2017 list and inclusion in both the [Dow Jones Sustainability – North America and World – Indices](#). Republic was also awarded the Gold Class Award in the [2018 RobecoSAM's Sustainability Yearbook](#) and earned the Carbon Disclosure Project's (CDP) Global Climate Management Level and the [Supplier Climate Management Level](#) distinctions. In addition, Glassdoor honored the Company with the [Employees' Choice Award](#).
